

Riding the Wireless Wave

Mobility meets connectivity with the new trends in wireless data communications. In-building and building-to-building wireless LANs and WANs are becoming a strategic component of the enterprise technology plan. These solutions allow users to roam freely through buildings or entire campuses while remaining connected to the network.

Wireless offers more than enhanced convenience and productivity. These network designs eliminate the installation of expensive fiber infrastructures, an ideal option for older buildings or temporary work sites. Avnet Enterprise Solutions is focused on researching and testing the latest Wireless Communications developments and bringing these technology solutions and services to market.

The uses and implementation of wireless communications are diverse. Through our technical and finan-

cial processes we can tailor a wireless solution to meet business needs and budgets. Avnet Enterprise Solutions offers best-in-class products and quality of service networking knowledge. As a result, we can offer the most cost-effective design, implementation and support services for your network of any type – wired, wireless or a hybrid solution.

As an IT infrastructure architect, Avnet Enterprise Solutions integrates technology with your business to help you solve your most demanding problems and power leading business applications. Avnet Enterprise Solutions' proven technical and financial processes are built upon a comprehensive assessment, design, implementation and life cycle management methodology to help you minimize risk, maximize flexibility and optimize the use of your capital.
